Introduzione Subaru’s EJ251 and EJ252 Were 2.5-Litre Horizontal-Opilopedodor Four-Opceyboxer per Australia, Il Motore EJ251 à Stato Introdotto per prima volta nel Subaru be/bh liberty nel 1998 e successivamen BH OUTBACK, GD/GG IMPREZA RS E Subaru SG Forester. Per he suubaru bl/bp liberty e bp outback, the EJ251 à stato sostritto dal motore EJ252. Per Il Motore EJ252 Sono includes the modification: Secondo Subaru Australia, the 80 per cento dei Componenti del Motore à Stato Ridisegnato; Una will a Blocco del Cilindro Più’ Leggero Sono Stati Raggiuntura “Eliminando Il Rinforzo Eccessivo”; Liner del Cilindro Thinner e Più’ Leggero Con Una Maggiore Morbidezza; A collettore di aspirazione has formed di ripiegamento; Introduzione di a sistema di 4-2-1 con tubi di testa di lunghezza uguale; E, Controllo Elettronico del Punto di Rottura (‘Drive-by-Wire’). Al di là qua Questi cambiamenti, tuttavia, i motori eJ251 e eJ252 sono comprehe pervere gli stessi allocated general. If prega di notare ches Questo articolo consider i motori eJ251 e eJ252 come sound stati forniti in veicoli convenzionata in australia; The Specifiche Per altri Mercati Possono Variare. I MOTORI SUBARU EJ251 E EJ252 AVENOA A BLOCCO IN LEGA DI LUMINIO CON FORI DA 99.5 mm à € “Con CILINDRI A SECCO IN GHISA à €” E UNA CORSA DA 79.0 mm per una CAPACITE DI 2457 CC. Il Blocco CILINDRICO PER I MOTORI EJ251 E EJ252 AVVA Un Design A Ponte Aperto per Cui enoisnecca e enoizeini .Jidilos elovlav id irotavellos ,ozeponom “Aoiç(œseps aznes opit id ihces ad etanoza etats onos œrdnilc rep elovlav ortiauç el, 252JE de 152JE irotom i rep ,oñif id œelcun nu noc œrolac la ïnetisær amooq ni ïlairetam e arusu’lla etnetisær alet aippod noc œtûrtsœc are de œsoznelis œtmanozinûf nu rep œdnotr œllorip id ïined avatneserp ehc aihgnic alognis anu ad ïadlug onare emmac a irebla ilg ïlmarne ammac a aihgnic ailed ïnongip i eraenilla rep ortsed emmac a orebla ïled œgnul “Àip are œrtisins emmac a orebla’l atatsed ailed tesffo’lled assuac A œrdnilc led acnab rep)CHOSI (œlognis œtavœleærpos emmac a orebla’l œraçigID 252JE de 152JE irotom i ,œcolv ‘Àip œnotsubœoc anu e emrofinu ‘Àip ammaif id aiv anu, etnarubrac/aira ïled œnozaleœssim œroçgim anu rep œrdnilc len avartne œrtœm aira rep œlmo’l aira id œtœnimov nu œtaerc onnah 252JE de 152JE irotom i rep œnozaripa id etrop el, œtaioœrcni œussif a œtœmadderffar noc œnimulla id aqel ni atatsed anu œnaveva 252JE de 152JE irotom i ïrdnilc id atseT ,œrdnilc a eroirepus etrap ad arret attodr e attaip eroirepus œnoitsubœoc a icifœrup, œdlios opit id ïnotsip a œnnoç œnavœdulcni ïnotsip ïled ehcitstrettarac ertIA ,œirtta’l œrrudir rep œœdbilom id œtœnetisœv nu e ïnotsip a œnotsip ïled tesffo’l œttodr œnaveva 252JE de 152JE irotom i rep ïnotsip i JE I esaf id irœsœcederp orol i œtœpsiR, œsuf œnimulla ni ïnotsip œnaveva 252JE de 152JE irotom i rep œtœmasab ïl noc œtaoœnal œtats “À œnolav led œtœmaigçolla’l e ïlapicnirp itœniscuc œuqnic œveva 252JE de 152JE irotom i rep œtœmasab ïl .à O œvon e ert a œigoloro’lled ïnoizisop œllen œtatroppus etats onos itœrap el, EJ251 and EJ252 engines had multi-point sequential fuel injection and centrally positioned candles. He has an œctœive œroup within the IDM and is based at Stellenbosch University where he directs the Reproductive Immunology Research Consortium in Africa (RIRCA). He is the past Chair of Immunology at UCT and holder of several NIH and European-based grants. GRAY, Prof Glenda MBBCB, FCP (Paeds) SA. Executive Director Perinatal HIV Research Unit, Wits Health Consortium, University of Witwatersrand; Associate Professor, Department of Paediatrics, University of Witwatersrand, South Africa; HVTN Director of International Programmes; HVTN Co-Principal Investigator; Chair of the standing committee on Health, ASSAF, Her Research Unit is involved with clinical research, epidemiology and operational research, and is a treatment site for HIV infected adults and children. Her research interests include HIV vaccine research, microbiotic research and other biomedical and behavioural interventions, and she is an investigator in testing two HIV vaccine regimens in late stage clinical development. Her TB research includes examining new agents to prevent TB, TB prophylaxis and TB vaccine evaluation. GROBUSCH, Prof Martin Professor, Dr. Med. (M.D.), PhD, M.Sc. (Lond), DTM&H (Lond), FRCP (Lond), Specialist in Internal Medicine, Infectious Diseases, Tropical Medicine, Full Professor and Chair of Tropical Medicine and Travel Medicine and Head, Centre of Tropical Medicine and Travel Medicine, Amsterdam Medical Centre, University of Amsterdam and the Netherlands. He has been an author on over 150 manuscripts in the field of infectious diseases and has an extensive track record in infectious diseases research and practice covering clinical, laboratory and epidemiological aspects. LESLIE, Dr Al Principal investigator Africa Health Research Institute (AHRI), Durban, South Africa; Associate Professor, University of KwaZulu Natal, Durban, Africa; Wellthome Trust Senior Fellow, Department of Infection and Immunity, University College London, United Kingdom. It is a HIV and TB immunologist focused on the study of the immune response to these pathogens in the affected tissues and how it refers to Cœ who can be observed by the blood. The goal of research is to improve the understanding of the immunopathology of TB and HIV, using this information to help develop new therapeutic approaches and diagnostic biomarkers. Lewinsohn, Prof Dave MD, PhD, professor and vice -president for research, Department of Medicine, Director of Ohsu Center for Global Child Health Research, Department of Pediatrics. His research focused on understanding the mechanisms with which the human immune system recognizes the cell infected with Mycobacterium tuberculosis (M.TB). This research is largely concentrated on T CD8+cells, with particular attention to those antigens that are recognized, both on the means with which they are presented. Him’s work has a strong translational component, asking if the T cells are classically and not classically limited are associated with the infection by M. TB, they reflect the immunological memory and are enriched on the site of the infection. Lewinsohn, prof. Deborah MD, professor and vice -president for research, responsible for the infectious diseases of the division, Wayne L. Tracy Professor of Infectious Diseases, Department of Pediatrics, Director of the Ohsu Center for the Health Research of Global Children’s Health. His research focuses on understanding the role of the development immune system on the susceptibility of small children to tuberculosis (TB) and understanding the role of the T ‘CD8+ imate cells and acquired in adaptation in the defense of the Tuberculosis quest. The translational meaning of this research is focused on the information of the of new vaccines and diagnostics for childhood tuberculosis. Moore, A/Prof Penny South African Research Chair in Viral Host Dynamics, Faculty of Health Sciences, University of Witwatersrand and National Institute for For ForDiseases. Its current research focuses on the widely neutralizing antibodies of HIV and their interaction with the evolution virus. Recent studies published on Plos pathogens, Nature and Nature Medicine have highlighted the role of the viral escape in the creation of new epitopes and immunotypes, thus guiding the development of the amplitude of neutralization, with implications for the design of the vaccine against HIV. Nicol, Prof Mark School of Biomedical Sciences, Division of infection and immunity, western Australia university; Professor in microbiology. Research interest in tuberculosis and development and testing the diagnostics of the point of care suitable for developing countries. Redd, dr. Andrew Phd, staff scientist in the international section of HIV and MST, National Institute of Allergy and infectious diseases at the United States National Institutes of Health; Medicine assistant professor at Johns Hopkins University. Him’s research is focused on the best understanding of the transmission of HIV and the dynamics of the disease with a special concentration on HIV superinfection, the latent HIV infection and the role of the virus in the HIV +organ transplantation. Wilkinson, A/Prof Katalin Principal Scientist at the Francis Crick Institute London; Honorary associate professor, division of infection and immunité, University College of London; Honorary Associate Professor, Department of Medicine, University of Cape Ctt. Her search focuses on the immunology of tuberculosis associated with HIV (TB). More specifically, the reconstitution of the immune response during antiretroviral treatment, in order to identify the correlates of protection (including the immune mechanisms that lead to a reduced susceptibility to TB) and pathogenesis (such as the inflammatory syndrome of reconstitution Tuberculosis. TB-Iris, TB-Iris, TB-Iris, TB-Iris, TB-Iris-Iris, TB-Iris-Iris, TB-Iris-Iris, Iris Iris-Iris, TB-Iris-Iris, TB-Iris-Iris, TB-Iriside); the biosignatura of the spectrum of tuberculosis infection, from latent infection to active disease; prevent tuberculosis infection in people infected with HIV in a more effective way; and the pathogenesis of Di meningitis and pericarditis, pericarditis.
